

Discovering Canada's Next Generation Copper-Nickel Projects

SPC
NICKEL
CORP.

District-Scale Portfolio in Prolific Regions

MUSKOX PROPERTY, Nunavut, Canada

- **District-scale polymetallic Cu-Ni-PGM** opportunity located Canada's Far North
- Recent consolidation gives SPC control of over **496 km²** of the **Muskox Intrusion**
- **Numerous similarities** to many of world's largest nickel mining camps: Norilsk, Sudbury, Voisey's Bay
- **Historic drilling points** to the potential of the project
 - **13.75m @ 5.04% Cu and 2.21% Ni** and from 98.12m¹

LOCKERBY EAST PROPERTY, Sudbury, ON, Canada

- **West Graham Deposit:** large tonnage open-pit in Sudbury Basin
- **Indicated Open-pit** resources of **19.3 Mt** at **0.42% Ni, 0.28% Cu**
- **Inferred Open-pit** resource of **3.3 Mt** at **0.37% Ni, 0.28% Cu**
- **LKE Deposit** underground resource and **Blue Sky** potential
- **1,000m** trend of high conductivity EM targets down-dip of the LKE Deposit
- Base and precious metal grade increase with depth
- Potential or a new stand-alone **polymetallic Ni-Cu-PGM** Discovery

¹Page, J.W., Culbert, R.R., and Martin, L.S. 1988. Geochemical, geophysical and diamond drill reports on the Muskox property, NWT. Equinox Resources Ltd., DIAND Assessment Report 082562,56 p., 8 data Appendices

The Nunavut Critical Metals Rush is On

- SPC Nickel's Muskox Project is located 70 km south of Kugluktuk within the **Kitikmeot Region** of Nunavut (KIA)
- Dramatic increase in exploration activity for Critical Metals within western Kitikmeot Region. Focus is on Cu-Ni-PGM's, Cu-Ag and U
- Proposed new infrastructure development is designed to link Nunavut to the rest of North America and global shipping lanes
 - Grays Bay Road and Port
 - Qikiqtarjuaq deep-water port
- Mineral exploration companies operating in Nunavut benefit significantly from the land settlement agreement with the Inuit - offer a clear legal and governance framework that facilitates exploration while respecting Inuit rights and interests

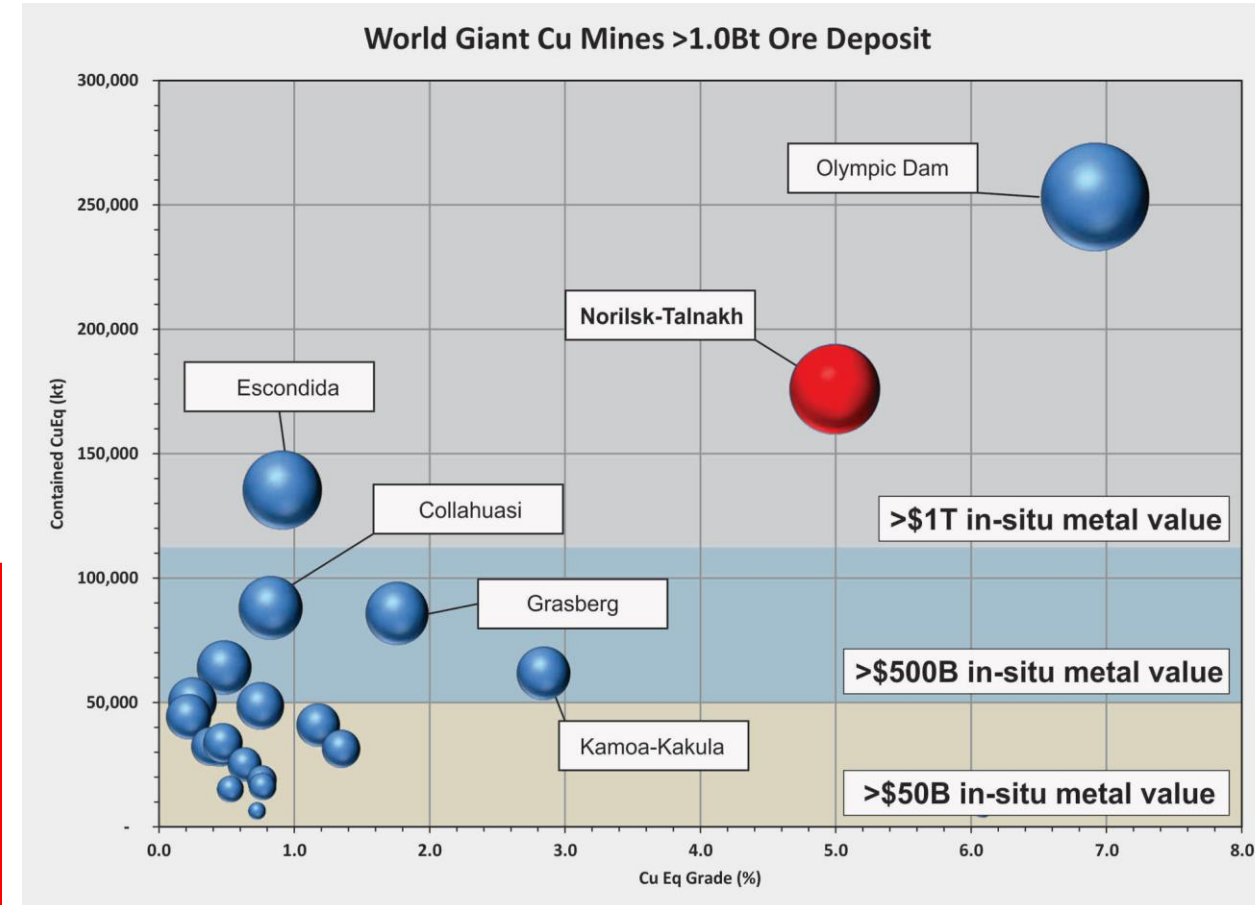

Generational Discovery Potential

- Tier-1 Geology with Analogs to Global Giants (Norilsk, Sudbury, Voisey's Bay)
- Largely untouched by modern (15-20 yrs) exploration and geophysical techniques (*2025 field program, MT/EM surveys completed*)
- **High-grade polymetallic mineralization** exposed at surface across a **125 km** long intrusion, with historic **high-grade** intersections up to **13.75m @5.04% Cu** and **2.21% Ni**
- **Proprietary historic exploration database** equivalent to >\$20M in exploration spending
- **District-scale control** over a massive (**496 km²**) , underexplored magmatic system in Nunavut's emerging critical metals corridor.
- **Permits in place:** drilling, camp, fuel storage, water use etc

Targeting an Emerging Tier-1 Cu-Ni-PGM District

- **Multi-commodity** – Natural revenue balance across cycles; hedge the commodity cycle
- **Strategic Metals** – Cu, Ni, Co, Pt, Pd for energy & electrification
- **High Value Per Tonne** – >\$300/t NSR; by-product credits often offset costs
- **Generational Assets** – Large deposits operating over decades
- **Exploration Upside** – Proven models + potential for deeper and near-mine discoveries
- **Norilsk-Talnakh** hosts 3.5Bt @ 5.0% CuEq (2.5% NiEq), making it the largest Ni resource and 6th largest Cu resource globally.
 - **2nd largest Cu resource** on the planet in terms of contained CuEq tonnes, hosting more than 175Mt of contained CuEq
 - Estimated in-situ value **>\$1.5T USD**

Companies that secure polymetallic projects today will be best positioned to thrive in a volatile, metal-hungry global economy!

The Right Geological Environment

Crustal-scale Structures

- The Muskox Intrusion occurs along a crustal scale structural boundary marking the western margin of the Slave Province
- Uplift and rifting due to a mantle plume (Mackenzie event)

Large Igneous Province (LIP)

- Part of the Proterozoic **Mackenzie Large Igneous Province** (Coppermine flood basalts, Mackenzie dyke swarm)
- Responsible for continental scale rifting and the emplacement of mantle-derived fertile mafic-ultramafic magmas
- Evidence of nickel depletion in overlying flood basalts

Interaction with Crustal Sulphur Source

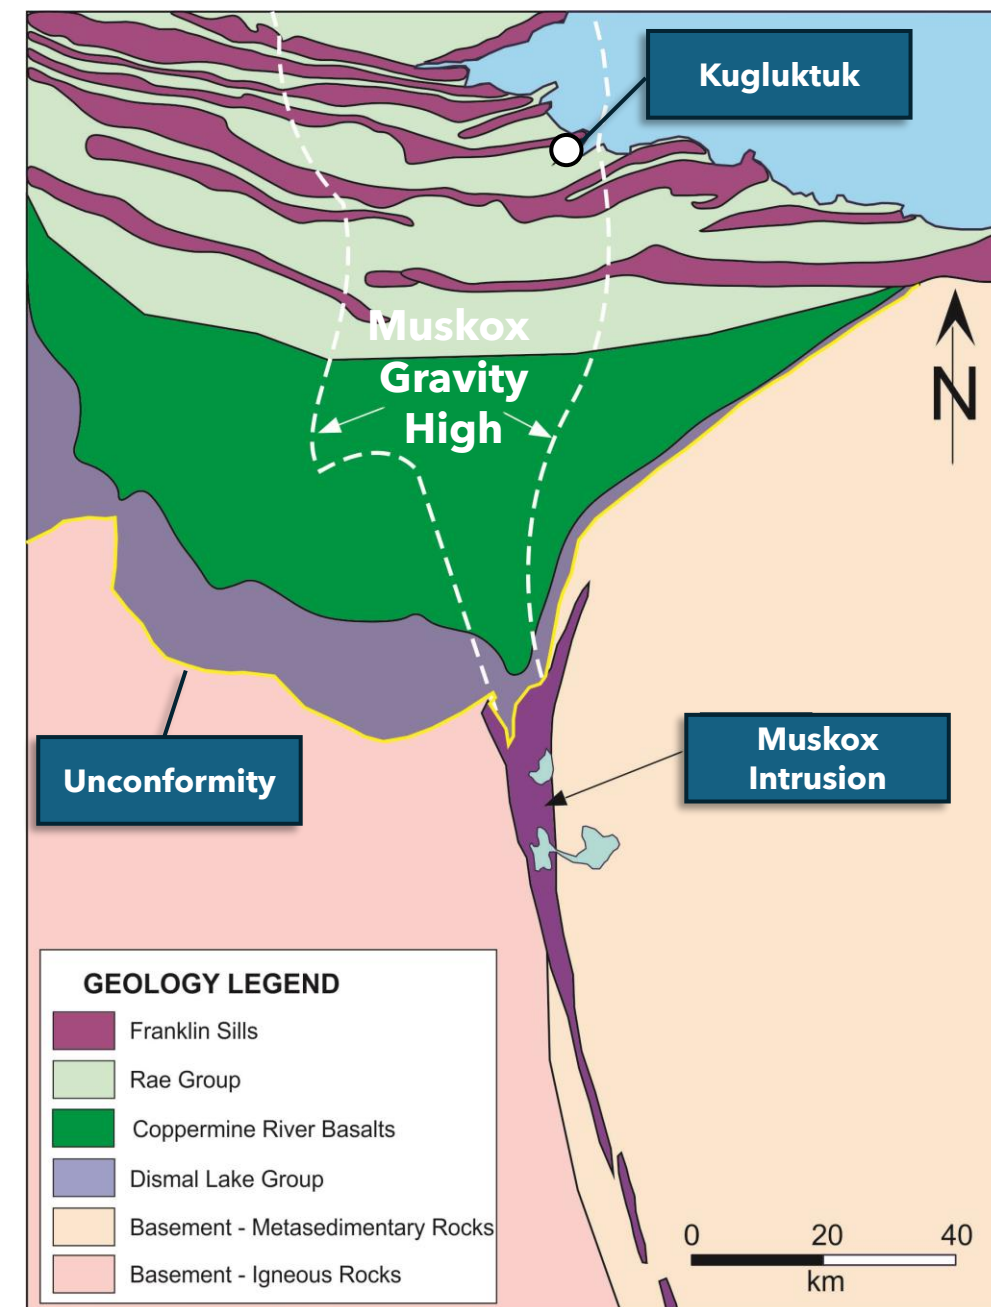

- Muskox Intrusion is emplaced into sulphide-bearing metasediments

Feeder Conduit Architecture (Dynamic System)

- Represent a major open-system intrusion
- Plumbing system to overlying flood basalts of the Mackenzie LIP
- Feeder Dyke (60 km long) represents a dynamic environment with a 50m wide core zone of magmatic breccia
- The **Keel Zone** represents the intersection of the **Feeder Dyke** and the **Main Intrusion** (analogous to the Ovoid Zone - Voisey's Bay Intrusion)

High-grade Cu-Ni-PGM Mineralization

- High-grade massive sulphide is present at surface along the entire 125 km length of the intrusion
- Muskox Intrusion can produce **extremely high-grade** polymetallic sulphides

Muskox Cu-Ni-PGM Property

Muskox Intrusion

- Discovery by Inco in the 1950's
- One of the largest and most underexplored copper-nickel systems globally
- Approximately **125 km** long, and ranges from **200-600m** wide in the feeder dyke to **11 km** wide in the main body of the intrusion
- Long, deep Feeder Dyke extends for over **60 km** - **suggests a powerful, sustained mineralizing system**
- Comprised of **4 main geological components**; the Feeder Dyke, Marginal Zone, Layered Series and the Roof Zone.
- Unique geology** is comparable to some of the world's best-known and prolific polymetallic camps: Voisey's Bay, Norilsk, Sudbury

Muskox Intrusion

Granophyric Roof Zone

Granophyre and gabbro

Layered Series

Granophyre and gabbro

Olivine pyroxenite, pyroxenite and websterite

Olivine gabbro and troctolitic peridotite

Dunite, feldspathic peridotite and gabbro

Marginal Zones & Feeder dyke

Peridotite, feldspathic peridotite and gabbro

Coppermine River Group

Flood Basalts

2 km
2 km

Feeder Dyke

Country Rocks

- Dismal Lake Group
- Hornby Bay Group
- Hepburn Intrusive Suite and Akaitcho Group
- Recluse and Epworth Groups

Basal Contact and Footwall Cu-Ni-PGM Mineralization

High-grade Drill Intersections

- Historic drilling focused on the known high-grade surface showings
- Drilling has encountered discontinuous zones of high-grade Cu-Ni-PGM associated with the basal contact of the Muskox Intrusion
- High-grade massive Cu-PGM rich veins common within the underlying hornfels country rock
- Average drill depth is < 125m

Selective historical high-grade drill intersections

Pyrrhotite Lake Zone - Inco 1950's

Cautionary Statement: The Company considers the cited public domain resource estimate to be historical in nature and cautions the reader that they may no longer be relevant. The Company is not treating the historic estimate as a current mineral resources.

Notes:

- Length refers to downhole length.
- CuEq grades are based on \$7.00/lb Ni, \$4.00/lb Cu, \$1,050/oz Pt, \$1,000/oz Pd, \$3,300/oz Au.

Scale - Massive Untested Potential

- **200 km²** of prospective contact to a vertical depth of 1,250m (not including Feeder Dyke)
- Comparable in scale to the Sudbury Basin – est. **215 km²** of target contact down to a vertical depth of 1,250m
- Total strike length of the Feeder Dyke (including area under the main intrusion) is approximately **100 km**
- The exposed **Feeder Dyke** has been tested with two drill holes over its **60 km** strike length
- The **Keel Zone Target** remains virtually untested over a distance of **>40 km**

Exploration Focus

Speers Lake Target

Two main styles of mineralization

- Sharp-walled massive Cu-PGM rich sulphide veins hosted within adjacent altered metasediments (M017788)
- Enriched in PGMs, Palladium dominated
- Cu-Ni semi-massive to massive sulphide at the contact or within the footwall metasediments (M017786)

Exploration Focus

Pyrrhotite Lake Target

Three main styles of mineralization

- Massive Ni-sulphide mineralization with loops of massive chalcopyrite (M07774)
- Sharp-walled massive Cu-PGM rich sulphide veins hosted within adjacent altered footwall metasediments (M017839). Two separate locations 200m apart
- Enriched in PGM's, lower relative to Equinox Target
- High-grade Ag-Zn veins hosted with fractures in the thermally metamorphosed metasediments (**M017847 assayed 2,940 g/t Ag and 9.45% Zn**)

Sample ID	Ni (%)	Cu (%)	Co (%)	Ni Eq (%) ¹	Pt (g/t)	Pd (g/t)	Au (g/t)	Ag (g/t)	3E (g/t)

Surface Results Support Discovery Potential

- SPC Nickel's surface sampling between 2021-2024 supports the significant potential revealed in historical drilling
- Results confirm widespread, high-grade mineralization in multiple geological settings within the Muskox Intrusion
- Multiple samples across **Equinox, Pyrrhotite Lake, and Speers Lake** returned double-digit Cu+Ni percentages and impressive precious metal values
- Results from surface sampling include:
 - 19.5% Cu, 9.42% Ni** and **107.3 g/t PGMs**

Category	Target	Sample ID	Cu (%)	Ni (%)	Pd (g/t)	Pt (g/t)	Au (g/t)	Pd+Pt+Au (g/t)	Cu+Ni (%)

Advancing the Muskox Project

Next Steps - 4 Year Plan

2025

- Completed initial airborne based geophysics across the main Muskox Intrusion and the Feeder Dyke
 - Main Intrusion - Airborne EM and Magnetotellurics (MT) surveys
 - Feeder Dyke - Airborne Magnetics/Electromagnetics (EM) survey
- 2-3-week follow-up field program
- Target generation

2026

- Complete follow-up ground based geophysical surveys on priority targets
 - Main Intrusion - Targeted moving loop EM surveys
 - Feeder Dyke - Targeted ground EM surveys
- Establish field camp on Stanbridge Lake (*Permits in place*)
- **2,500m of diamond drilling** + borehole geophysics

2027

- **5,000m of diamond drilling** + borehole geophysics
- Establish field camp at Marceau Lake (*Permits in place*)
- 4-week follow-up field program

2028

- **7,500m of diamond drilling** + borehole geophysics

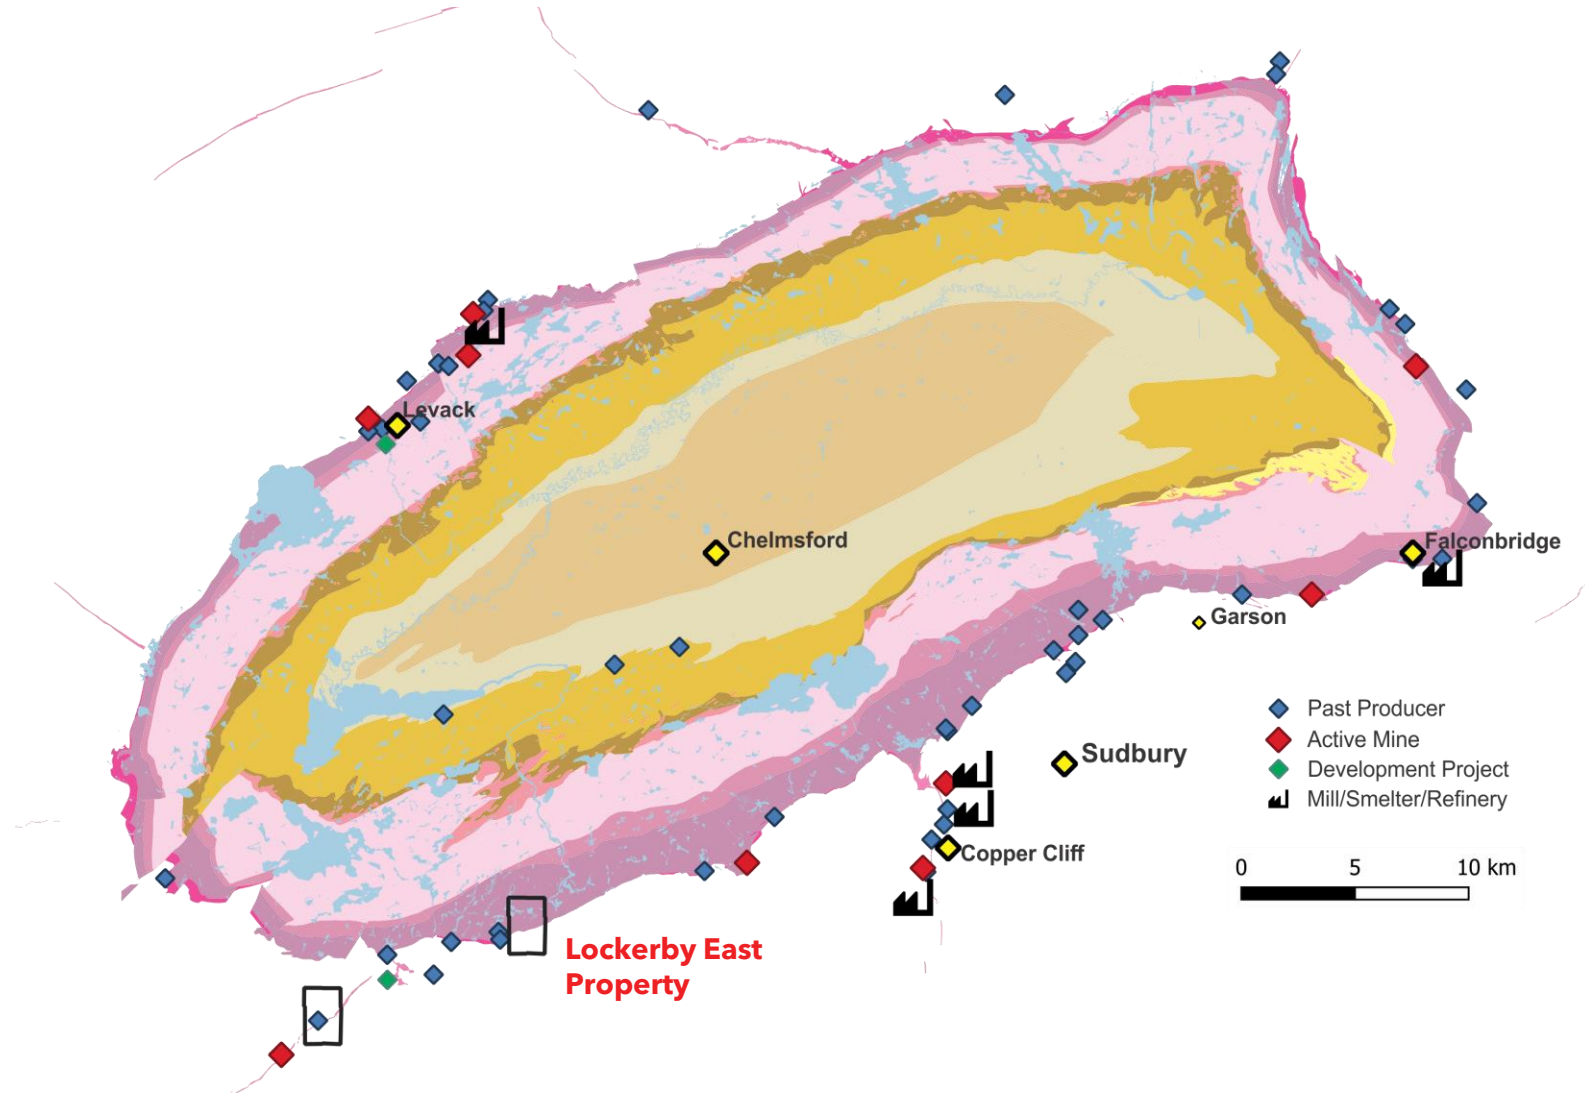

Sudbury Mining District

130 Years of Continuous Production

- Unique Geological History:** Sudbury represents the eroded remains of a 1.85-billion-year-old impact crater
- History of Mining:** Since late 1880's, 77 mines have produced over 1.8 billion tons of ore worth an estimated \$330 billion using current metals prices¹
- Active Camp:** Nine mines currently in production operated by Vale, Glencore and Magna. Two mines in development
- Excellent Infrastructure:** Well-developed infrastructure including a network of roads, railways and electrical grid
- Processing, Smelting and Refining:** Region hosts two mills, two smelters and one Nickel refinery (Vale & Glencore)

1. Natural Resources Canada and Ontario Geological Survey 2015. Discovery Site of Sudbury Mining Camp, Greater Sudbury: Birthplace of a world-famous mining district; GeoTours Northern Ontario series.

Lockerby East Property

A Tale of Two Deposits

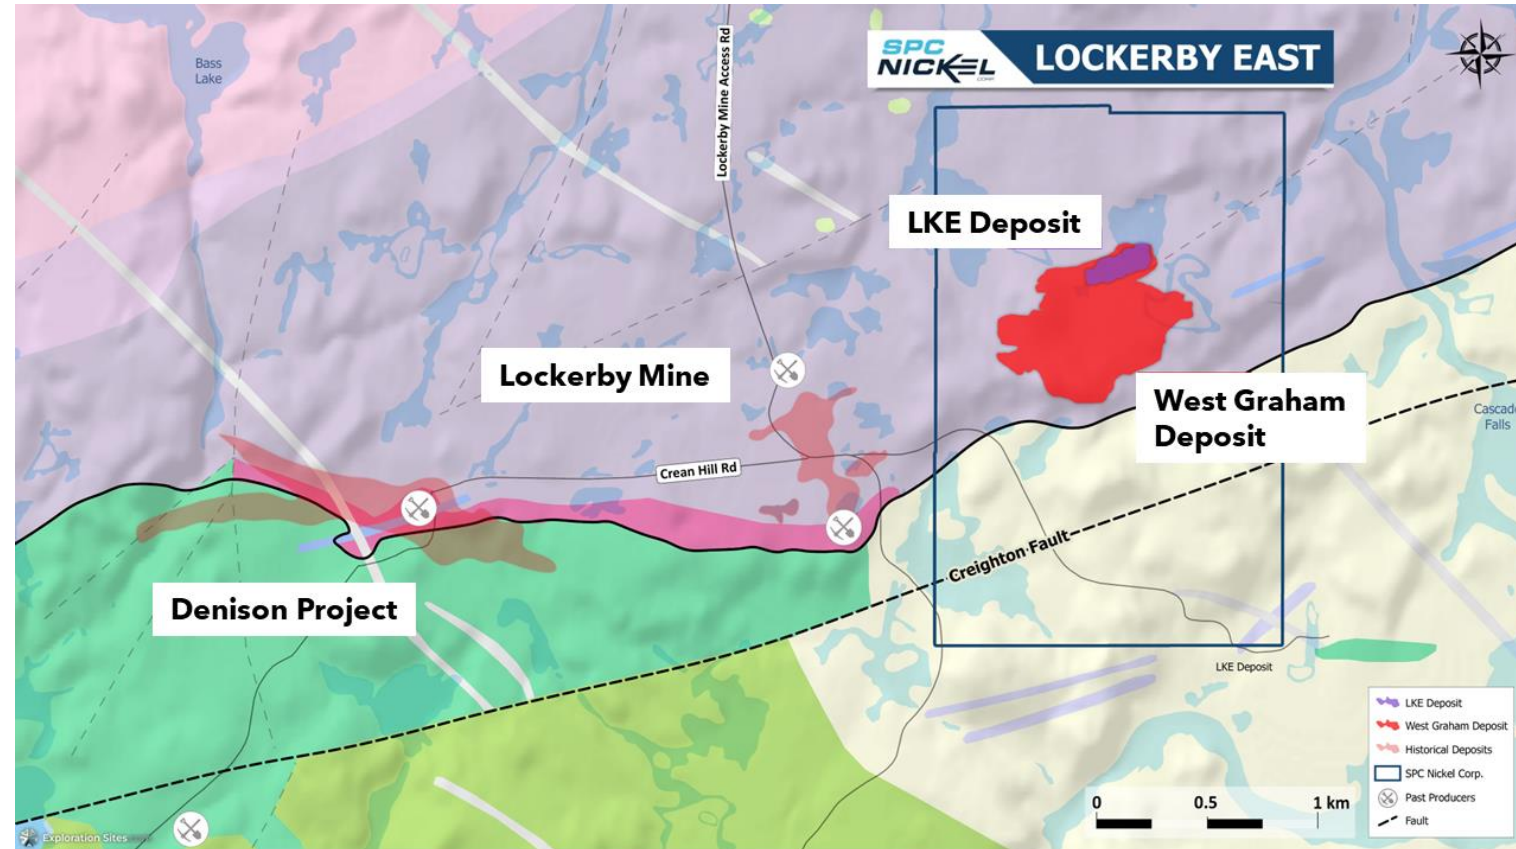

West Graham Deposit - Open Pit Potential

- Broad zone of high-tenor blebby Ni-Cu sulphides (**0.3-0.7% NiEq**) with a well-developed higher-grade core (**>0.7% NiEq**)
- Large 'In-Pit' and 'Out-of-Pit' Resource with expansion potential for both with additional drilling (**Total MRE = 461.0 Mlbs NiEq**)
- Potential for a higher-grade, low-cost starter pit (above 200m) with a low strip ratio
- Near-term cash flow generation

LKE Deposit - Exploration Upside

- Blue sky potential for high-grade Ni-Cu mineralization
- Lens of high-grade, high Ni tenor massive sulphide at the SIC contact and as veins remobilized into the adjacent footwall
- Below 550m vertical 100% SPC-owned, not subject to the SPC-Vale Option Agreement.
- Open at depth for 1,000m; numerous untested EM targets

West Graham to LKE Deposit

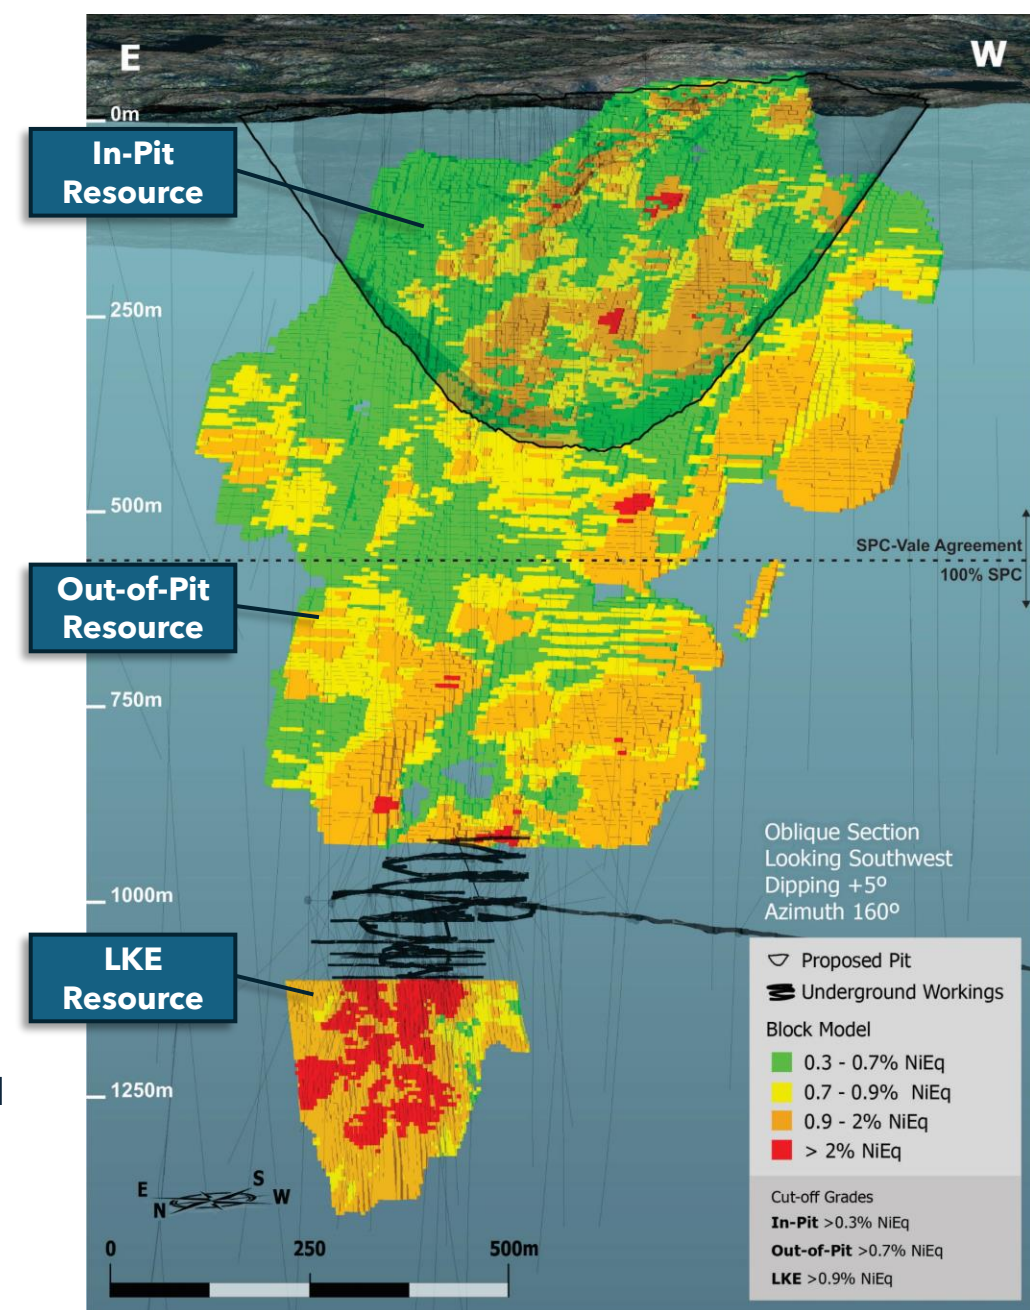

Large Mineralized System

Upside Potential Increases with Depth

- Mineralized system extending over a distance of 1,350m
- Grade, Ni tenor (5-6% Ni to >10% Ni tenors), PGM content and strength of EM conductors increase with depth
- Transition to more massive sulphide dominated mineralization with depth
- In the shadow of a headframe:** System has similar depth extents and morphology as the adjacent large and well-mineralized Ellen-Lockerby System (Estimated 11Mt @ $\approx 1.6\%$ Ni, $\approx 1.0\%$ Cu (Production + Reserves + Resources)¹)

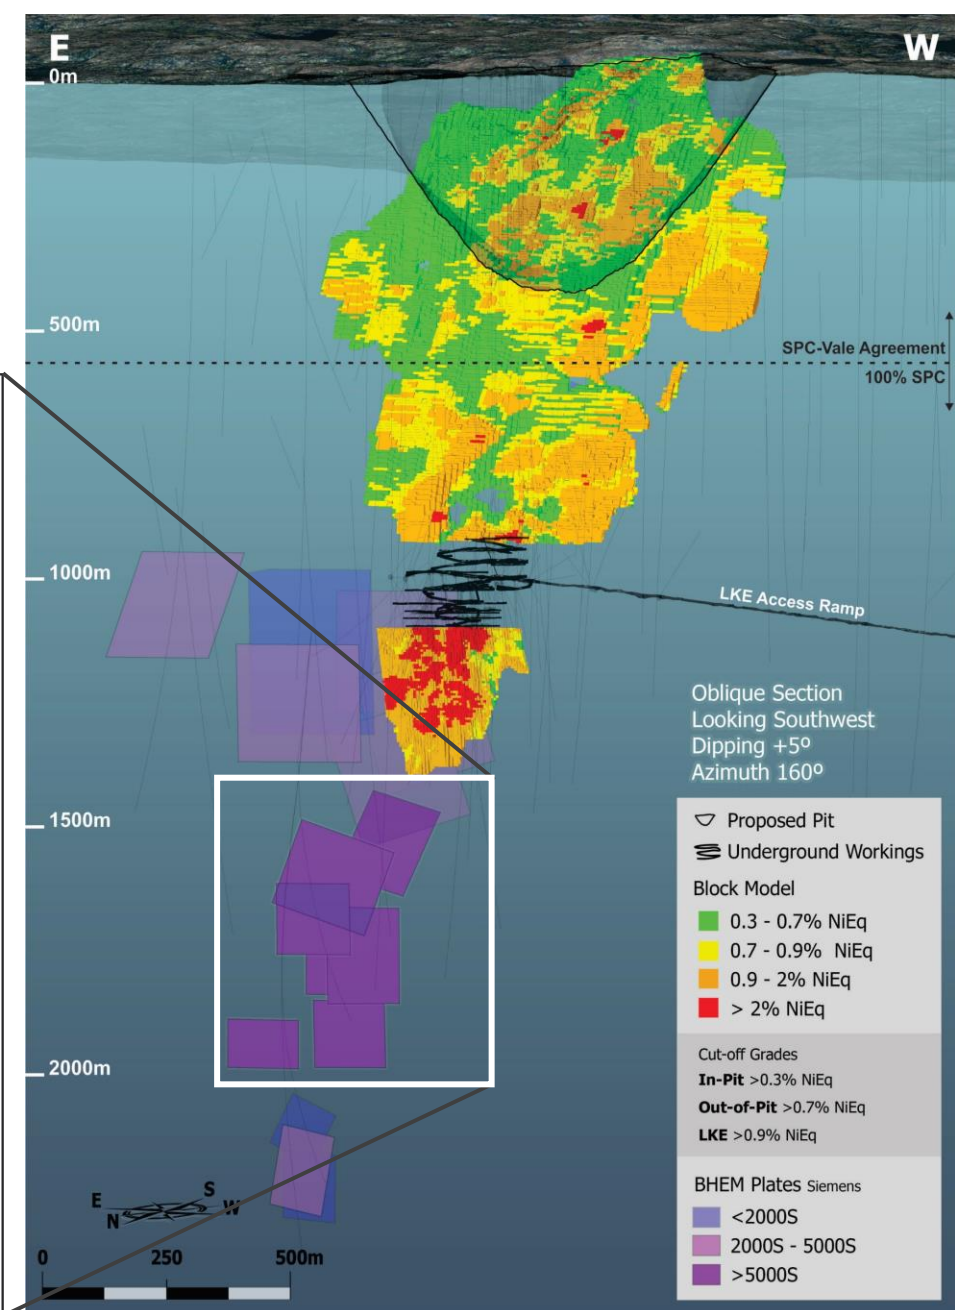

Targeting the LKE Deposit - Fall 2025

- Lens of high-grade, high Ni tenor massive sulphide at the SIC contact and as veins remobilized into the adjacent footwall
- Surrounded by a lower grade halo of mineralization
- Significantly higher PGM grades compared to West Graham Deposit
- Previous drilling by First Nickel returned **5.60% Ni, 1.26% Cu, 0.80 g/t PGM over 10.0m²** (Ni tenor of 9.0%)
- Open down-dip for 1,000m
- December 2023 MRE: **665,000 t Indicated @ 1.59% NiEq; 124,000 t Inferred @ 1.39% NiEq** (0.9% NiEq cutoff)

Blue Sky Exploration Potential

- **Fall 2025 drill program** targeting 1,000m trend of untested high conductivity EM targets down-dip of LKE Deposit
- Minimal previous drilling by Falconbridge in 1980s
- Historical holes encountered narrow zones of high-grade, very high Ni tenor massive sulphide hinting at the potential of the area
 - 1.57% Ni, 0.78% Cu (**12.3% Ni Tenor**) over 1.0m
 - 2.80% Ni, 0.86% Cu (**9.5% Ni Tenor**) over 0.65m
- 200m by 700m area with strongest conductivity readings suggests a robust system below
- Similar geological environment as the adjacent past-producing Lockerby Mine - Depth Zone

Advancing the Muskox Project & Lockerby East Property

2025 Catalysts - Results Pending

MobileMT Survey Results

- The first survey of its kind completed over the highly prospective Muskox Intrusion. The MT survey generated deep-penetrating geophysical data which will contribute to mapping potential conductive targets beneath the Muskox Intrusion.

Electromagnetic (EM) Survey Results

- Integration of EM survey results with data from the MT survey will refine our geological model and allow us to strategically prioritize drill targets for the next stage of exploration.

Muskox Field Program Assays

- SPC Nickel's team conducted detailed geological mapping and sampling of high-priority targets. These efforts will enable us to better understand the styles and controls of mineralization associated with the Muskox Intrusion. Results will directly inform the next phase of exploration, including future drilling.

LKE Deposit Drill Program (TBA)

- Planned drill program targeting high-grade polymetallic sulphide mineralization via 1,000m trend of untested high conductivity EM targets down-dip of LKE Deposit (Sudbury). Details to be announced.

Technical Team, Decades of Leadership

Grant Murre - <i>President, CEO & Director</i>	Professional geologist with 25+ years of experience in the mining industry. In-depth knowledge of magmatic nickel deposits, particularly in the Sudbury Basin. Co-recipient of the Bernie Schneiders Discovery of the Year for Northwestern Ontario (2013).
Guy Mahaffy - <i>CFO</i>	25+ years in CFO, Corporate Secretary and/or Board member roles of public companies on both the Toronto Stock Exchange and the TSX Venture Exchange. Chartered Accountant, Chartered Professional Accountant, Certified Public Accountant (Illinois) and Chartered Financial Analyst.
Scott McLean - <i>Executive Director</i>	Professional geologist with 30+ years of exploration and management experience, including 23 years at Falconbridge where he was credited with the discovery of the Nickel Rim South Mine in Sudbury, Ontario. For his role in that discovery, Mr. McLean was awarded Prospector of the Year in 2004 by the Prospectors and Developers Association of Canada.
William Shaver - <i>Director</i>	COO McEwan Mining, seasoned mining executive with 50+ years of management and experience in all facets of mine design, construction and operations. In 1980, Mr. Shaver founded Dynatec, now one of the leading contracting and miner operating groups in North America. He was named Ernst & Young Entrepreneur of the year in 2013 for his dedication to advancing mining innovation.
Mark Goodman - <i>Director</i>	Extensive experience in the mining and capital markets sectors, with a strong background in corporate development, finance, and strategic growth. Mark's prior roles include serving as President of Dundee Corporation (TSX: DC.A), a public Canadian independent holding company.
Alger St. Jean - <i>Director</i>	Professional geologist with 25+ years of experience, with a primary focus on nickel and gold in Quebec and Ontario. Chief Operating Officer at Dumont Nickel, Chief Geoscientist at Orford Mining, Director, Kharrouba Copper Company. Former roles include senior positions at RNC Resources (Karora Minerals), and Xstrata Nickel (Falconbridge).
Brian Montgomery - <i>Director</i>	Recognized for his expertise in all aspects of mining, corporate, real estate and business law, Mr. Montgomery is Counsel at MLA Law in the Business Law Group. He is also a former partner and head of the Commercial and Corporate Group at Weaver, Simmons LLP.

Advancing High-Quality Cu-Ni-PGM Assets

Opportunity

Focused on the Exploration and Development of high-quality North American based Cu-Ni-PGM assets; from past producers with resources to district scale greenfield opportunities.

Tier-1 Geological Setting

Muskox Intrusion (496 km²) shares geological similarities with Voisey's Bay, Norilsk and Sudbury. Historic drilling returned up to **13.75m @ 5.04% Cu** and **2.21% Ni**. Extensive surface mineralization, dynamic magmatic system make it a compelling analog.

Scale & Exploration Upside

Muskox **Feeder Dyke and Keel Zone** represent major structural targets for high-grade Cu-Ni-PGM mineralization. The **Keel Zone** is a potential Voisey's Bay "Ovoid" analog - SPC Nickel controls 125 km of this fertile structure.

Location & Infrastructure

Lockerby East (West Graham & LKE Deposit): **Situated in the world-class Sudbury Mining District** is in close proximity to advanced transportation, power, processing, smelting and refining assets.

23Mt

Development Leverage

Fall 2025 drill program targeting **LKE Deposit**: open at depth, with high Ni tenor and strong EM conductors pointing to deeper targets. Adjacent **West Graham open-pit MRE: 283Mlbs NiEq** with a low strip starter pit.

Focused Team

Skilled Management team with a proven track record of success.

Thank You

Grant Murre,
President & CEO
